

restart\_fns::read\_chains

restart\_fns::read\_energies

restart\_fns::error  
\_check

```
graph LR; A[restart_fns::read_chains] --> C[restart_fns::error_check]; B[restart_fns::read_energies] --> C;
```

The diagram illustrates a control flow where two functions, 'restart\_fns::read\_chains' and 'restart\_fns::read\_energies', both lead to a common function 'restart\_fns::error\_check'. The first two functions are represented by white boxes, while the final function is a gray box, indicating it is the destination or a final state in the process.
